

Actions to Increase 5G NSA Traffic Share

Optimization

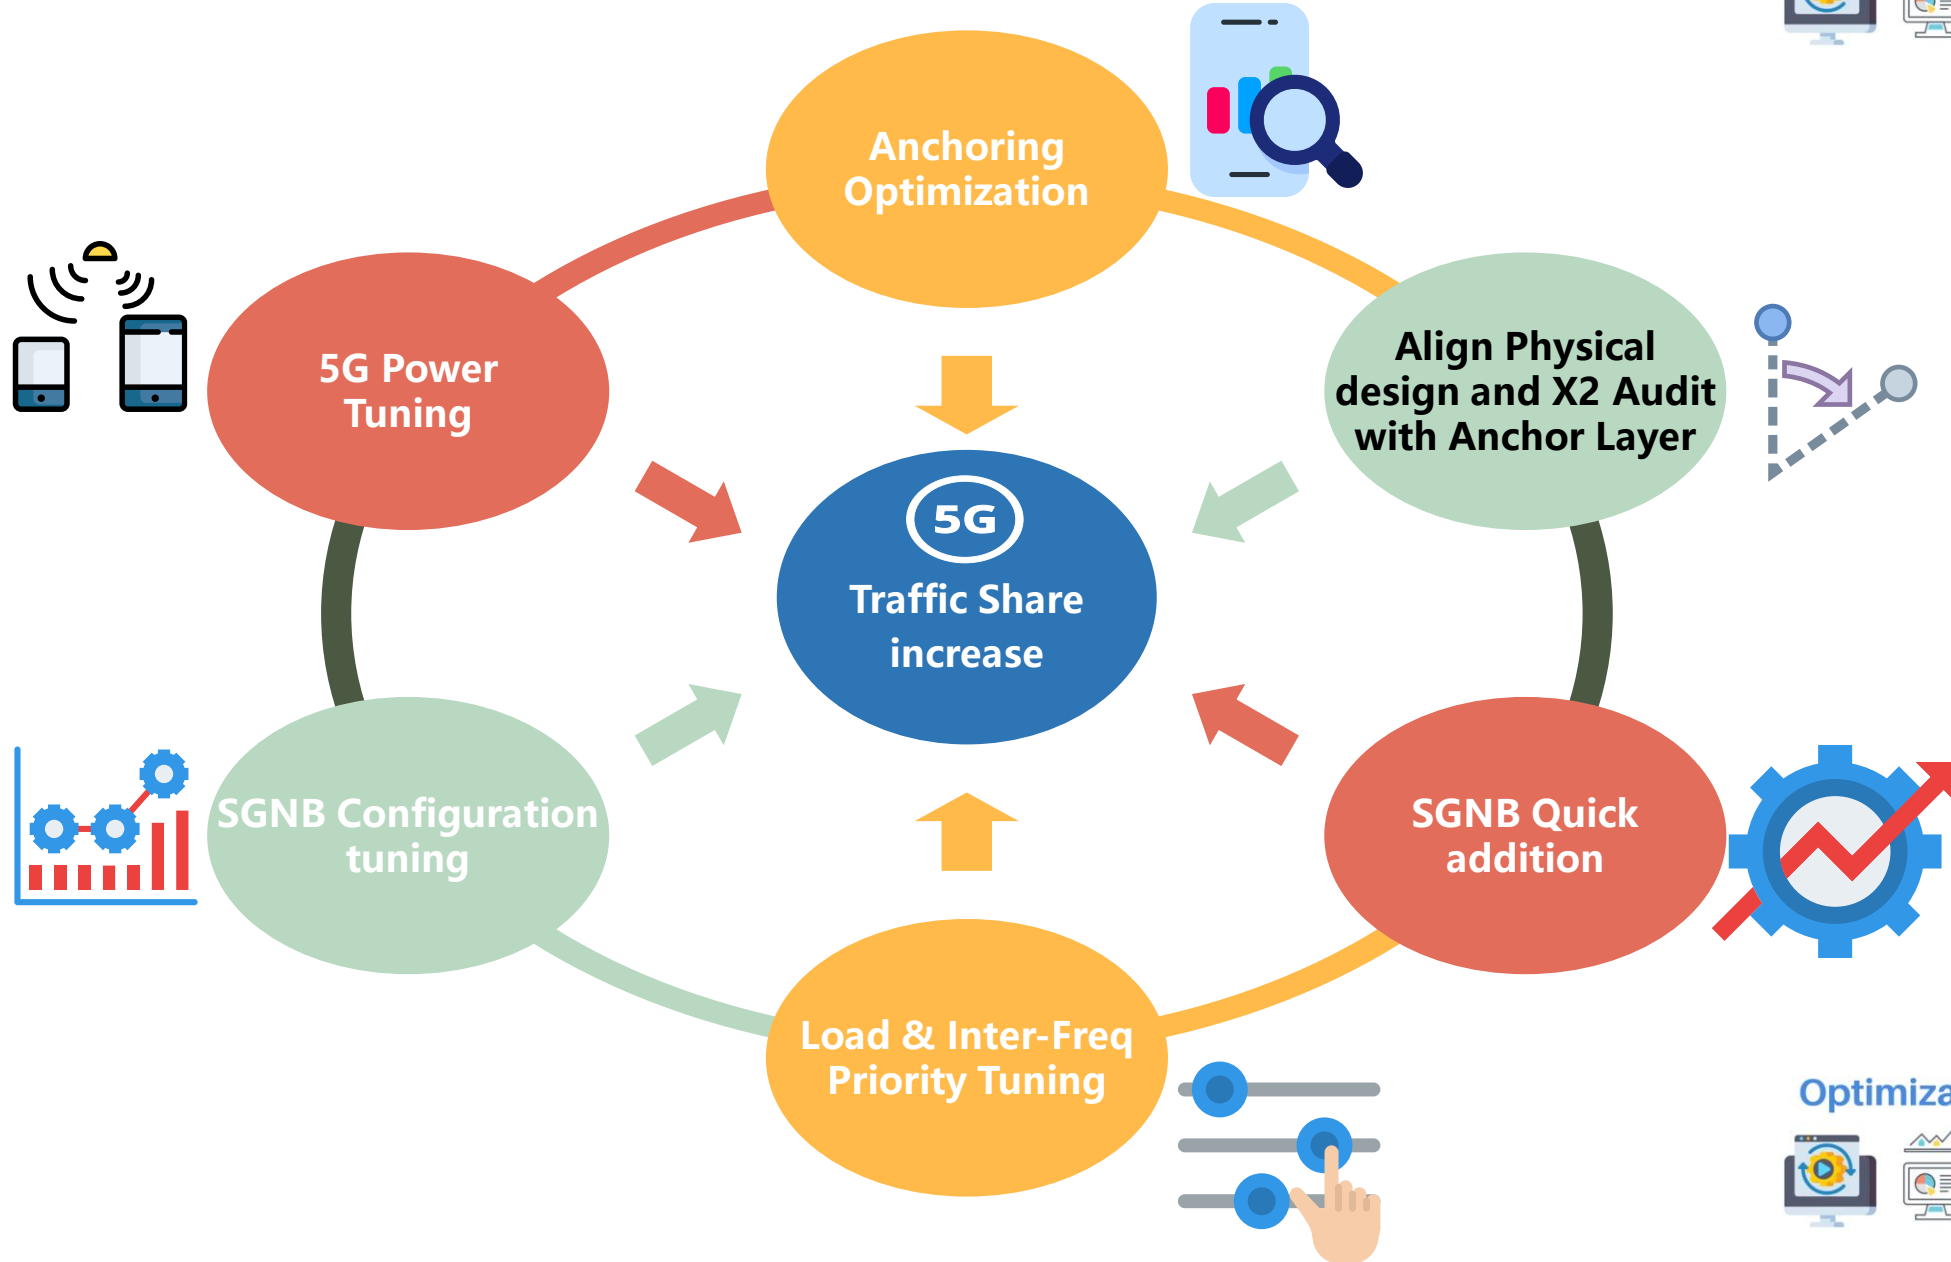

Technology

Mohamed Eladawi

5G Actions Summary to Increase 5G NSA Traffic Share

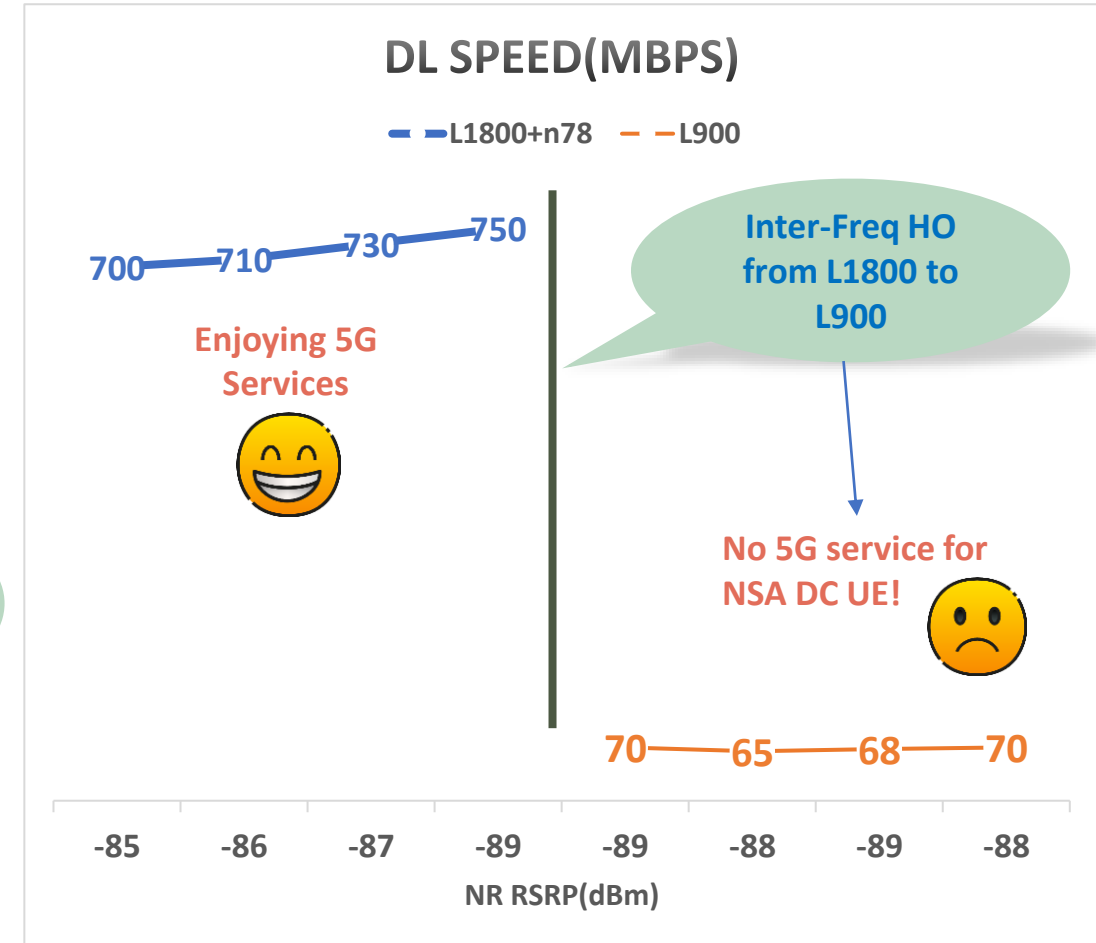

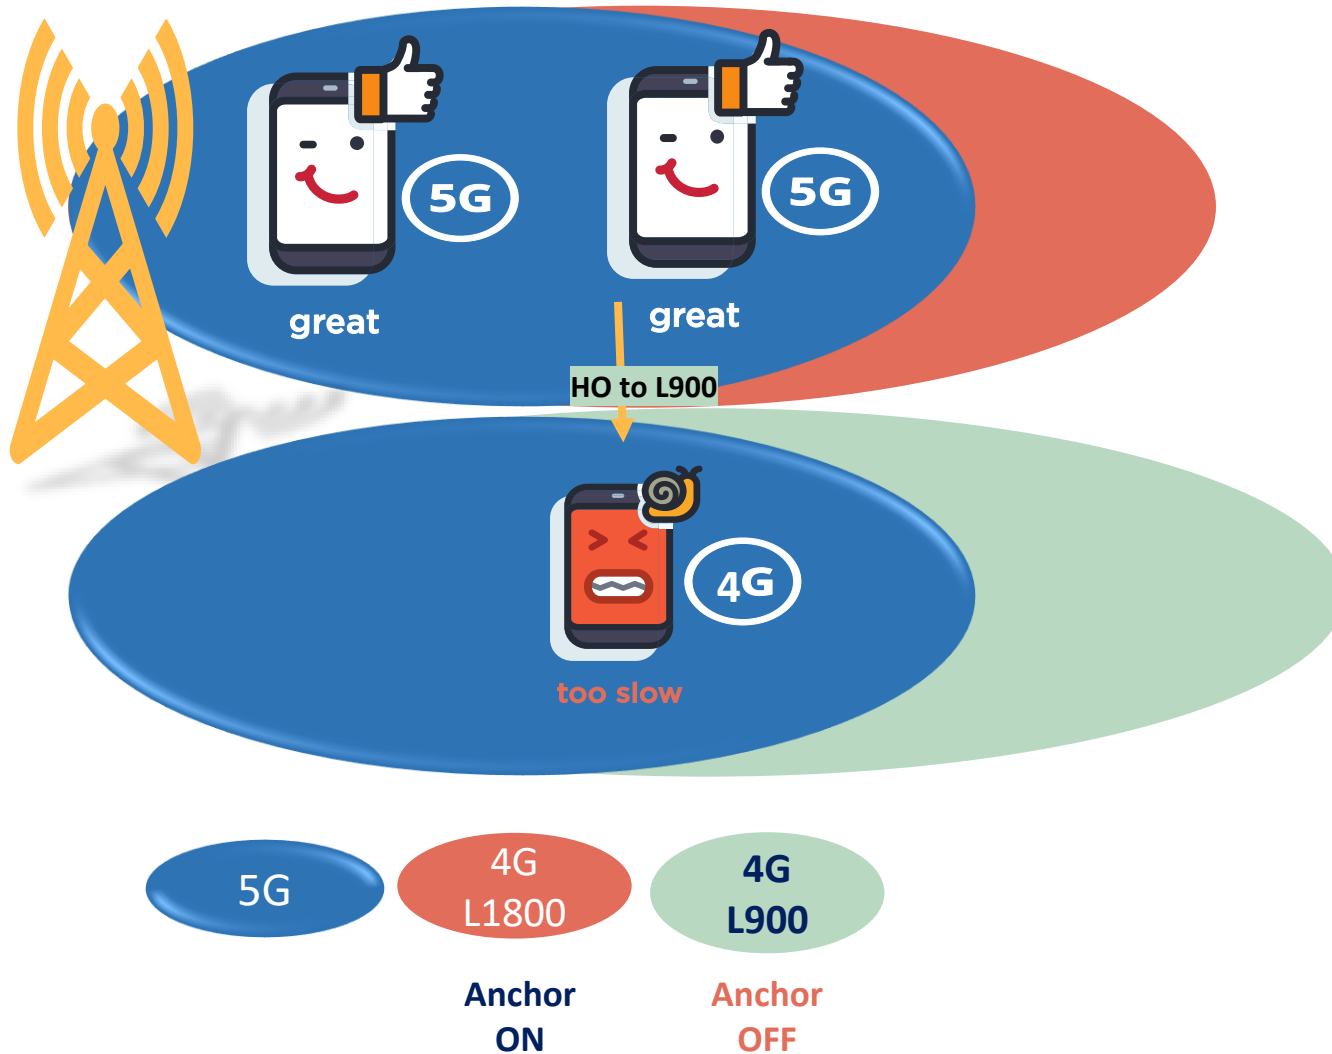

(1) 5G Audit Action: Align Physical design and X2 Audit with Anchor Layer

- This part covers the primary inputs that need to be checked to ensure smooth 5G services.

(2) 5G Inter-Freq Optimization: Load & Inter-Freq Priority Tuning for 5G NSA Users

Unnecessary handovers for 5G Users can negatively impact 5G non-Standalone services, especially when users move from the Anchor layer to the non-Anchor layer.

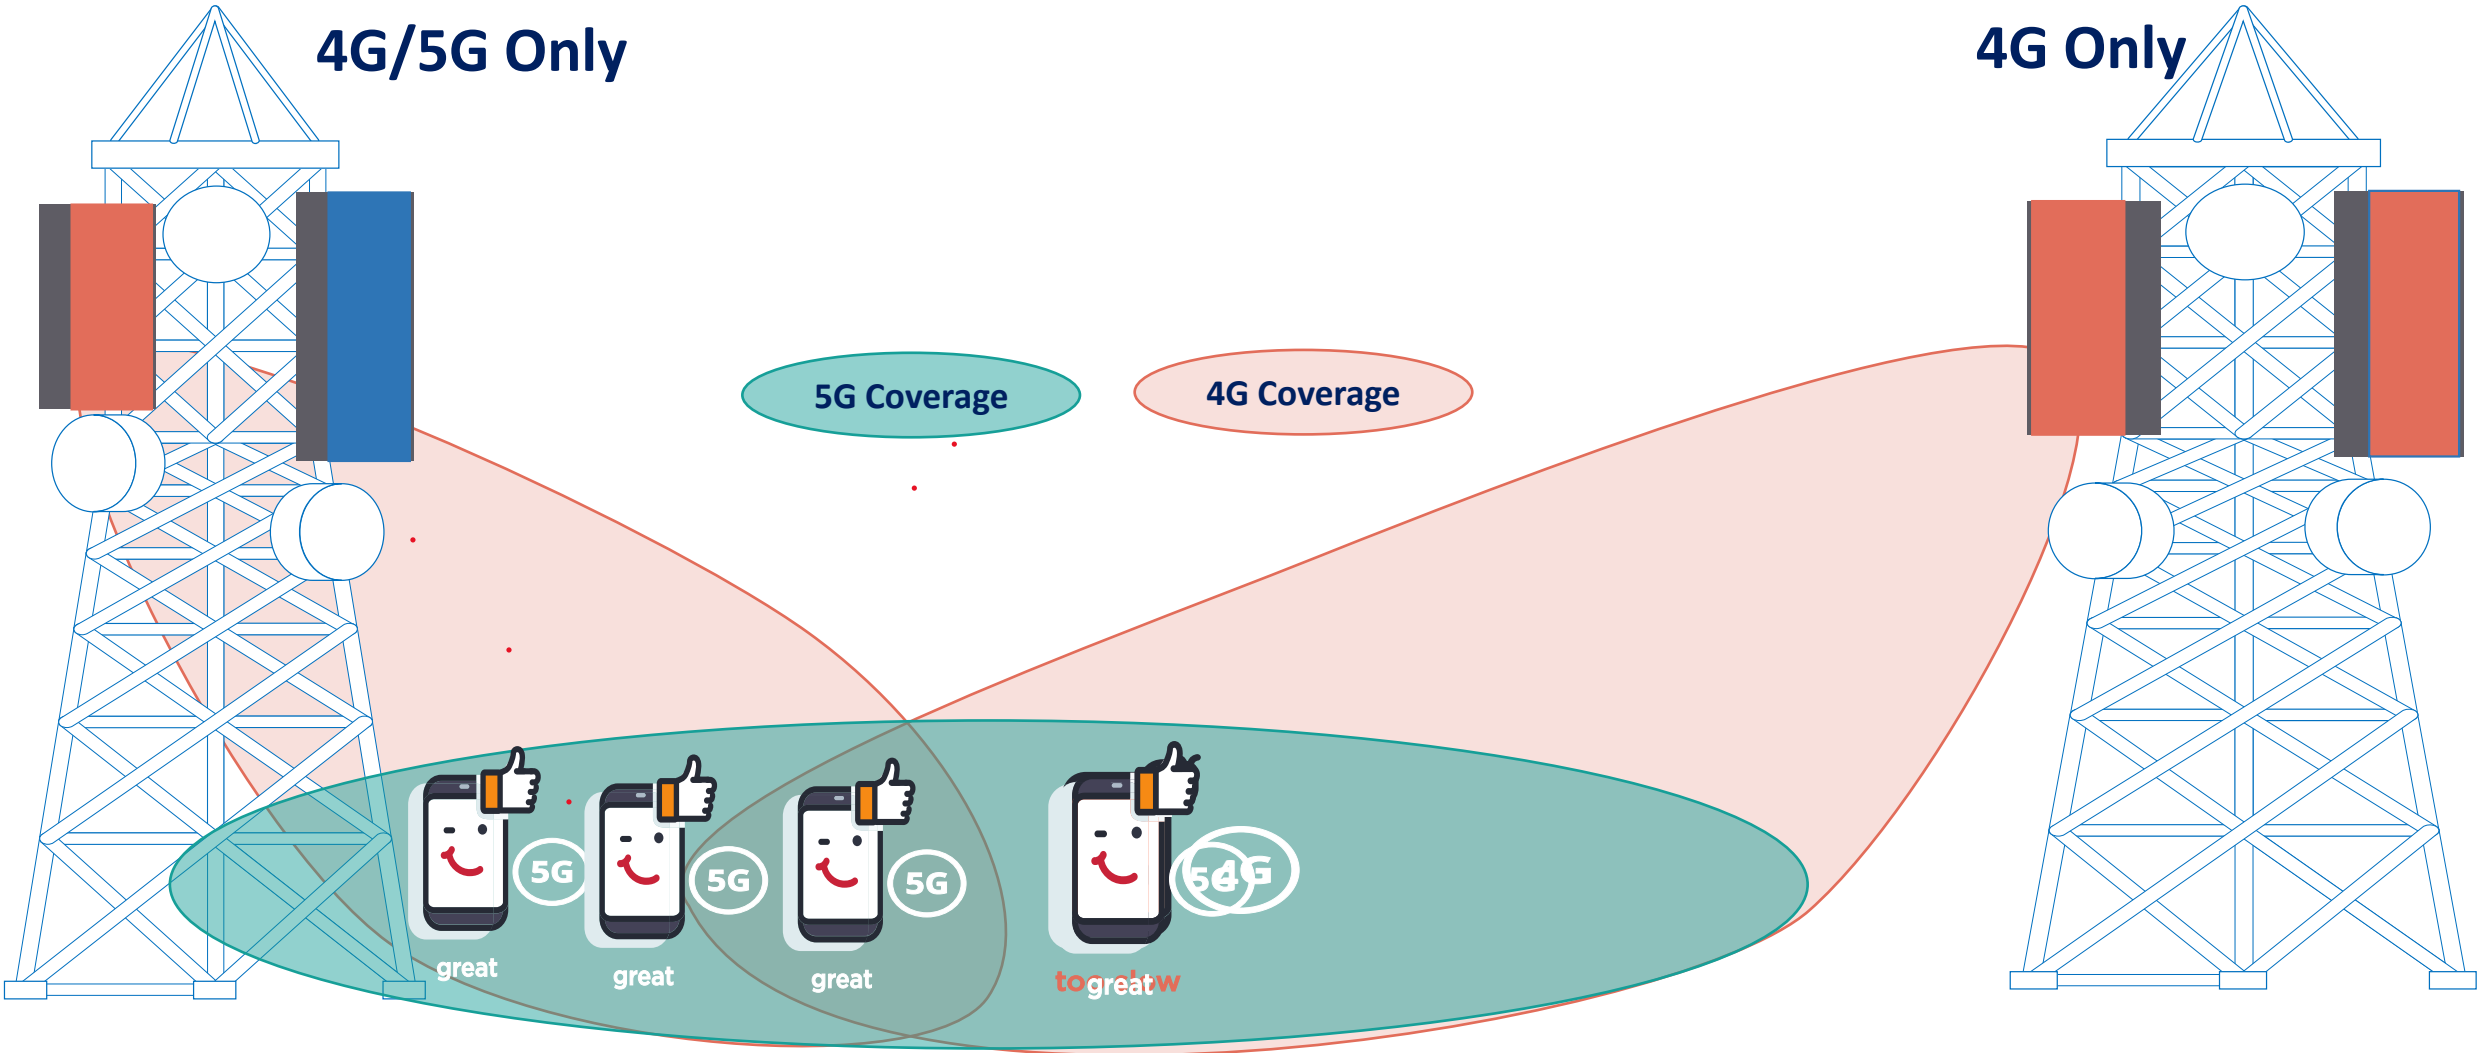

*Assuming either L900 Anchor is Off or UE is not supporting L900 as Anchor

(3) Anchor addition for 4G Sites only: Anchoring Optimization

4G/5G Only

4G Only

(4) SGNB Configuration tuning : SGNB Addition related parameters tuning(A2/B1 Tuning & ENDC Quick Addition)
